

GEOG 506: Community Service Practice in Geography

Faculty: Mark Stemen
Phone: 898-5428
Email: mstemen@csuchico.edu

Office: 541 Butte Hall
Office Hours: MWF 1:00-1:50
W 5-5:30, 8:30-9, and by appt.

This course is designed to provide students an opportunity to deepen their understanding of geography and planning through an applied research project, as well as expose them to the everyday workings of a planning department in a medium-size town.

Readings

Stemen, *GEOG 506 CD*

Stoknes, *What We Think About When We Try Not to Think About Global*

Warming: Toward a Social Psychology of Climate Action

Assignments

12 two-page journals	360 pts
Sector Analysis	200 pts
Vulnerability Assessment	250 pts
Dispatch From the Future	150 pts
Three-page final journal	40 <u>pts</u>
	1000 pts

Objectives

Provide students the opportunity to apply their geographic skills to the problems of climate action.

Increase student knowledge and understanding of city planning

Engage students in discussions about important works in the field of environmental geography and sustainability

Provide students the opportunity to improve their writing skills

Promote civic engagement and service to the region

Acquiring a bunch of facts is not the major focus of this class. I am more concerned with how you think. I designed the class so we can discuss and expand on the same concepts throughout the semester. Since writing is thinking on paper, we will spend a majority of the class focusing on your written work.

Every week you will write a two-page journal on that week's readings. I comment on these journals, but I do not grade them. If it appears to me that you have done the reading, and spent some time thinking about it, you receive full credit. I assign this exercise to get you into the habit of writing about what you read. Journals are due the week they are assigned.

Journals and class discussions are the core of the heart of the course. Come prepared to talk. You will read each other's journals at the start of each class. Then I will lead the seminar in a discussion of the week's readings, how they relate to each other, and how they relate to earlier readings.

In 2016, students used Cal-Adapt to forecast the climate for Chico in 2030. In 2017, students built on the previous effort and produced a vulnerability assessment for the City of Chico or Butte County, using templates provided by the State of California. In 2018, we are coming home and producing an assessment of Chico State's vulnerability to climate change. Students will focus on telling positive stories of climate adaptation from the perspective of 2037, Chico State's 150th Anniversary.

If you have a disability of any type that makes it difficult for you to complete any of above the course work please let me know and I will work with you to resolve the difficulty.

"I believe it will be calming to get to know the world that is likely to be our home in the future rather than dreaming about a world that could have been. The first step down the road to mental peace is to obtain a precise description of what the future is going to look like. Then to accept it. And finally to stop grieving."

- Jorgen Randers, 2052

Weekly subjects, reading assignments, and course work deadlines

(This schedule may/will change as the seminar evolves.)

August 29 – Climate Action on Adaptation

The Nine-Step Adaptation Strategy Development Process

The Five Ds

Chico Impact Table

A Fable For Tomorrow
